## 1 Original Model with Government / Lobbying Effort

Lobby

$$\max_{e^t, m^t, l^t} \sum_{t=1}^{\infty} \beta^{t-1} \{A(m_t)F^\alpha \cdot l_t^{1-\alpha} [P^W + \tau(\gamma(e_{t-1}))] - l_t - \mu_t - e_t\} \quad \text{s.t.} \quad m_t = m_{t-1} + \mu_t$$

Bellman Equation

$$V_l(e_t, m_t) = \max_{e_t, m_t, l_t} \{A(m_t)F^\alpha \cdot (l_t)^{1-\alpha} [P^W + \tau(\gamma(e_{t-1}))] - l_t - \mu_t - e_t + \beta V_l(e_{t+1}, m_{t+1})\}$$

Value Function

$$V_l(e_t^*, m_t^*) = \{A(m_t^*)F^\alpha \cdot (l_t^*)^{1-\alpha} [P^W + \tau(\gamma(e_{t-1}^*))] - l_t^* - \mu_t^* - e_t^* + \beta V_l(e_{t+1}^*, m_{t+1}^*)\}$$

$t$  = this period

$t + 1$  = next period

$\beta$  = discount factor

$l$  = lobby

## 2 No Government / Lobbying Effort, Technology Depreciates

Lobby

$$\max_{m^t, l^t} \sum_{t=1}^{\infty} \beta^{t-1} \{A(m_t)F^\alpha \cdot l_t^{1-\alpha} \cdot P^W - l_t - \mu_t\} \quad \text{s.t.} \quad m_{t+1} = (1 - \delta)m_t + \mu_t$$

$$\text{So } \mu_t = m_{t+1} - (1 - \delta)m_t$$

### Bellman Equation

$$V_l(m_t) = \max_{m_t, l_t} \{A(m_t)F^\alpha \cdot (l_t)^{1-\alpha} \cdot P^W - l_t - (m_{t+1} - (1-\delta)m_t) + \beta V_l(m_{t+1})\}$$

In the optimal stage  $m_t = m_t^* = m_{t+1}^*$

### Value Function

$$V_l(m_{t+1}^*) = \{A(m_{t+1}^*)F^\alpha \cdot (l_t^*)^{1-\alpha} \cdot P^W - l_t^* - (m_{t+1}^* - (1-\delta)m_{t+1}^*) + \beta V_l(m_{t+1}^*)\}$$

Which implies that

$$V_l(m_{t+1}^*) = \frac{1}{1-\beta} [A(m_{t+1}^*) \cdot F^\alpha \cdot (l_t^*)^{1-\alpha} \cdot P^W - l_t^* - \delta(m_{t+1}^*)]$$

### FOCs

$$\begin{aligned} \frac{\partial V_l(m_{t+1}^*)}{\partial m_{t+1}^*} &= \frac{1}{1-\beta} \cdot \left[ \frac{\partial A(m_{t+1}^*)}{\partial m_{t+1}^*} \cdot F^\alpha \cdot l_t^{*1-\alpha} \cdot P^W - \delta \right] \\ \frac{\partial V_l}{\partial m_t} &= \frac{\partial A(m_t^*)}{\partial m_t^*} \cdot F^\alpha \cdot l_t^{*1-\alpha} \cdot P^W + \frac{\beta}{1-\beta} \cdot \left[ \frac{\partial A(m_{t+1}^*)}{\partial m_{t+1}^*} \cdot F^\alpha \cdot l_t^{*1-\alpha} \cdot P^W - \delta \right] \cdot (1-\delta) = \delta \end{aligned}$$

$$\frac{\partial V_L}{\partial l_t} = (1-\alpha)A(m_t^*) \cdot F^\alpha \cdot l_t^{-\alpha} \cdot P^W = 1$$

$$\text{rearrange } l_t^{*1-\alpha} : (1-\delta)A(m_t^*) \cdot F^\alpha \cdot P^W = l_t^{*\alpha}$$

$$\text{square } \left( \frac{1-\alpha}{\alpha} \right) \text{ on both sides} = [(1-\delta)A(m_t^*) \cdot F^\alpha \cdot P^W]^{\frac{1-\alpha}{\alpha}} = l_t^{*1-\alpha}$$

### Euler Equation:

$$\begin{aligned} \frac{\partial A(m_t^*)}{\partial m_t^*} \cdot F^\alpha \cdot [(1-\delta)A(m_t^*) \cdot F^\alpha \cdot P^W]^{\frac{1-\alpha}{\alpha}} \cdot P^W + \frac{\beta}{1-\beta} \cdot (1-\delta) \\ \cdot \left[ \frac{\partial A(m_{t+1}^*)}{\partial m_{t+1}^*} \cdot F^\alpha \cdot [(1-\delta)A(m_t^*) \cdot F^\alpha \cdot P^W]^{\frac{1-\alpha}{\alpha}} \cdot P^W - \delta \right] = \delta \quad (1) \end{aligned}$$

### Simplified Euler Equation:

$$\text{Set } \left[ \frac{\partial A(m_t^*)}{\partial m_t^*} \cdot F^\alpha \cdot P^W \right] = \Pi \text{ and Set } [(1-\delta)A(m_t^*) \cdot F^\alpha \cdot P^W]^{\frac{1-\alpha}{\alpha}} = Z$$

$$\text{Then } \Pi + Z + \frac{\beta}{1-\beta} \cdot (1-\delta) \cdot \Pi \cdot Z - \frac{\beta}{1-\beta} \cdot (1-\delta) \cdot \delta = \delta$$

$$\Pi \cdot Z \left[ 1 + \frac{\beta}{1-\beta} \cdot (1-\delta) \right] = \delta + \left[ \frac{\beta}{1-\beta} \cdot (1-\delta) \right]$$

$$\Pi \cdot Z \left( \frac{1-\beta+\beta-\beta\delta}{1-\beta} \right) = \frac{\delta(1-\beta)}{1-\beta} + \frac{\beta\delta-\beta\delta^2}{1-\beta}$$

$$\Pi \cdot Z \left( \frac{1-\beta\delta}{1-\beta} \right) = \frac{\delta-\beta\delta^2}{1-\beta}$$

$$\Pi \cdot Z = \frac{\delta(1-\beta\delta)}{1-\beta} \cdot \frac{1-\beta}{1-\beta\delta}$$

$$\Pi \cdot Z = \delta$$

Change  $\left[(1 - \delta)A(m_t^*) \cdot F^\alpha \cdot P^W\right]^{\frac{1-\alpha}{\alpha}}$  to  $\left[(1 - \delta)^{\frac{1-\alpha}{\alpha}} \cdot A(m_t^*)^{\frac{1-\alpha}{\alpha}} \cdot F^{1-\alpha} \cdot P^{\frac{W-W\alpha}{\alpha}}\right]$

$$\frac{\partial A(m_t^*)}{\partial m_t^*} \cdot F \cdot P^{\frac{W}{\alpha}} \cdot (1 - \delta)^{\frac{1-\alpha}{\alpha}} \cdot A(m_t^*)^{\frac{1-\alpha}{\alpha}} = \delta$$

$$\frac{\partial A(m_t^*)}{\partial m_t^*} \cdot A(m_t^*)^{\frac{1-\alpha}{\alpha}} = \frac{\delta}{(1-\delta)^{\frac{1-\alpha}{\alpha}} \cdot F \cdot P^{\frac{W}{\alpha}}}$$

$t$  = this period

$t + 1$  = next period

$\beta$  = discount factor

$\delta$  = depreciation rate

$l$  = lobby
